SAI LEELA **KURAGAYALA**

Los Angeles, CA | (551) 327-1799 | saileelakuragayala@gmail.com | linkedin.com/in/saileelakuragayala/

SUMMARY

Full-Stack AI Software Engineer with 5+ years of experience building scalable web applications, backend APIs, AI-powered business automations. Strong experience with Python, FastAPI, Django, Flask, React, Next.js, PostgreSQL, MongoDB, Docker, CI/CD, and cloud deployments. Hands-on with OpenAI API, Claude, Gemini, RAG pipelines, LangChain, AI agents, vector databases, and AI-assisted development workflows. Experienced in building content management systems, SEO-friendly websites, analytics dashboards, and internal tools, with hands-on experience integrating CRM, inventory, and procurement systems.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, SQL, HTML5, CSS3
AI / LLMs: OpenAI API, Anthropic API, Gemini API, LangChain, RAG Pipelines, AI Agents, Prompt Engineering, Vector Databases, FAISS, Pinecone, Embeddings, Fine-Tuning, On premise AI, CUDA, Multi-Agent Workflows, MCP.
Backend: FastAPI, Django, Flask, Node.js, Express.js, REST APIs, GraphQL, Microservices, JWT, RBAC, API Integrations, Microsoft Graph API (Outlook email read/write), Gmail API (email read/write), OAuth 2.0.
Frontend: React.js, Next.js, Angular, TypeScript, Tailwind CSS, Responsive Pixel perfect UI, CMS Dashboards, Component-Based Architecture.
Databases: PostgreSQL, MongoDB, SQLite, Neo4j, Redis, NoSQL, Alembic, Database Design, Query Optimization
Cloud / DevOps: AWS, Azure, GCP, DigitalOcean, Docker, Kubernetes, GitHub Actions, CI/CD, Linux, Nginx, Gunicorn, Uvicorn.
Tools / Platforms: Git, GitHub, JIRA, Postman, Swagger, Figma, WordPress, SEO, Google Analytics Concepts, CMS, CRM, ERP.

PROFESSIONAL EXPERIENCE

SE Builders Inc, AI Software Engineer — Mar 2026 – Present

- Built an in-house AI-powered construction project management platform korus designed to compete with market tools like Procore, Contractor Foreman, and Buildertrend, bringing project dashboards, estimating, daily reports, workforce tracking.
- Migrated SE Builders from a Wix-based website (https://old.sebuilders.com/) to a custom Next.js SEO-friendly website (https://www.sebuilders.com/) with CMS-managed projects, services, AI-generated SEO landing pages and blogs, lead capture and analytics, growing session duration from 45-50 sec to 2m 53s, engagement rate from 18% to 43%, keyword coverage from 8-15 to 150-200+, and monthly search impressions from 8K to 25K+.
- Set up early engineering standards, AI agent architecture, memory workflows, and vector database pipelines for the platform using Python, FastAPI, OpenAI API, Anthropic, Gemini, RAG, LangChain, PostgreSQL, embeddings, structured JSON outputs, prompt engineering, and human-in-the-loop review workflows.
- Designed a multi-agent AI Estimating platform to automate scope generation, vendor bid analysis, bid comparison, missing-scope detection, coverage validation, exclusions review, assumptions tracking, and risk analysis for construction estimating workflows.
- Reduced construction estimating turnaround from approximately 2 weeks to minutes by automating plan review, scope extraction, vendor bid cross-checking, trade-level line-item analysis, and AI-assisted estimate preparation, reducing manual estimating effort by 80·90%+.
- Built AI plan-review workflows that identified scope gaps, missed construction details, exclusions, and coordination risks that could be overlooked during manual review, helping uncover over $300,000 in potential cost exposure within the first month of internal testing and usage.
- Built AI daily-report workflows where superintendents can record job-site video updates, and the system converts them into transcripts, structured daily reports, progress summaries, key highlights, and action items, reducing daily report preparation from 30·60 minutes to a few minutes.

- Built AI marketing automation agents for LinkedIn posts, SEO blogs, city/industry landing pages, service pages, and project content, using a human + AI review workflow that reduced content production cycles from up to 2 weeks to hours and cut repeat content effort to roughly 1% of the previous manual process

S & S Fashions Inc, AI Software Engineer **Aug 2025 – May 2026**

- Designed Python-based automation workflows integrating ERP, CRM, inventory, procurement, order-management, vendor, and reporting systems through REST APIs and backend services.
- Built backend services and data pipelines using Python, PostgreSQL, REST APIs, automation scripts, and cloud-ready architecture patterns to improve business process efficiency.
- Developed analytics dashboards and automated reporting workflows to aggregate operational data across sales, inventory, vendor, and order-management systems.
- Collaborated with business stakeholders to convert manual operational processes into scalable software tools, reporting systems, and workflow automation solutions.

DBS Bank Ltd, Software Development Engineer **Aug 2022 – Jun 2023**

- Built and optimized distributed backend services using Python, PostgreSQL, Redis, and REST APIs to support high-volume financial workflows, improving response times and reducing database load through caching and query optimization.
- Improved platform performance by implementing Redis caching, optimized database queries, and backend service enhancements, reducing PostgreSQL load and improving response times.
- Developed workflow-processing modules supporting high-volume enterprise operations, real-time traceability, debugging, monitoring, and operational reliability.
- Improved observability through structured logging, distributed indexing, and backend debugging enhancements, reducing issue diagnosis time across production workflows.
- Participated in Agile/Scrum delivery using JIRA, sprint planning, backlog refinement, code reviews, technical walkthroughs, and mentoring junior engineers.

Ericsson Inc, Associate Software Engineer **Feb 2022 – Aug 2022**

- Redesigned internal dashboards using React, JavaScript, HTML5, CSS3, and responsive UI principles to improve usability, accessibility, and mobile experience.
- Refactored monolithic workflow-processing modules into modular Python services, improving maintainability and reducing regression risk.
- Developed automated unit tests using PyTest, improving backend reliability and release quality across internal applications.
- Enhanced CI/CD workflows by integrating automated test execution and managing build artifacts through JFrog Artifactory.
- Collaborated with frontend and backend teams on dashboard development, debugging, documentation, code reviews, and release validation.

I-Giants Inc, Software Development Engineer **Oct 2019 – Feb 2022**

- Designed and implemented backend services, API-driven middleware, and distributed workflow integrations using Python, Java, REST APIs, SQL, PostgreSQL, and MongoDB.
- Built reusable frontend modules using JavaScript, HTML5, CSS3, React/Angular-style components, and responsive design principles for client-facing and internal applications.
- Standardized cross-system communication, API response patterns, error handling, and logging to improve reliability and debugging across distributed applications.
- Supported database design, query development, backend integrations, and performance improvements for relational and NoSQL data stores.
- Participated in full SDLC activities including requirements analysis, development, testing, production issue debugging, deployment support, and technical documentation.

Creatik Solutions, Web Development Intern **Nov 2018 – May 2019**

- Built responsive web pages and modular UI components using HTML5, CSS3, JavaScript, and Tailwind CSS.
- Improved frontend performance through lazy loading, asset optimization, code cleanup, and reusable component design.
- Collaborated with stakeholders to convert UI requirements into clean, mobile-friendly web interfaces.
- Supported browser compatibility testing, debugging, frontend maintenance, and website updates.

EDUCATION

New Jersey Institute of Technology **May 2025**
Master of Science in Information Systems

ACHIEVEMENTS

- **Super Techie Award:** Recognized for technical contributions, workflow improvements, and system reliability enhancements.
- **DBS Hackathon Winner:** Secured 1st place among 1,000+ participants across India in a national-level web application development hackathon organized by Development Bank of Singapore.
